

# BWS-70

## Top-Oil Transformer Thermometer Termómetro Transformadores

### Product model and specification

The BWS-70 transformer temperature indicator is suitable for the instrument installed on the side of the transformer for temperature measurement.

The instrument has the characteristics of sensitive response, clear indication, simple structure and good reliability.

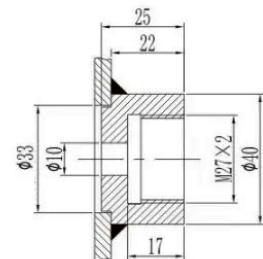

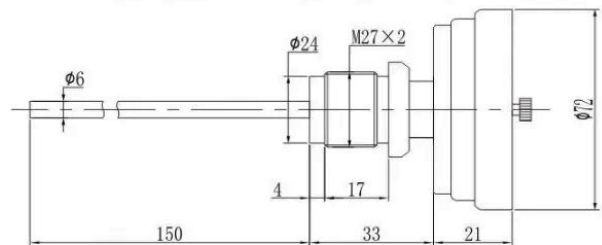

The instrument shell is made of stainless steel, which is beautiful in appearance and has a long service life.

### Working conditions

Temperature measurement range: -10C- 130C
Indication accuracy. 2.5 level
Operating environment temperature. -35C°- 55C°
Keep the pipe under pressure. 1.6MPa
Installation connector. M27x2

### Use and maintenance

- (1) To ensure the accuracy of temperature measurement, the length of the thermometer bulb inserted into the measured medium or sheath must be greater than 100mm.
- (2) The temperature bulb of the thermometer should avoid collisions, bending and deformation during use, installation and transportation.
- (3) When installing, the instrument should be rectified and the installation joints should be tightened. Do not use the thermometer case as a wrench to avoid affecting the accuracy of the instrument.
- (4) In normal use, the thermometer should be inspected every 12 months.
